

With Shavlik Security Suite, you're ready for any security and compliance event, now and in the future. Simple as that.

Shavlik Security Suite delivers Rapid Readiness so you can rapidly accelerate and continuously improve security and compliance readiness by simplifying IT security operations. In a matter of hours, not days or weeks, you'll be ready to identify and reliably close system security and compliance gaps with automated solutions that grow to address an enterprises' changing needs.

Shavlik Security Suite

With Shavlik Security Suite you'll BE READY...

- ▶ To find and eliminate gaps in your security
- ▶ To identify unauthorized applications running on your network
- ▶ To secure and patch all approved software to policies and regulations
- ▶ For your next audit event – in hours, not days
- ▶ To simplify virtualization security
- ▶ To continuously improve your security scorecard
- ▶ To answer, "How Secure Am I?" – with confidence
- ▶ To improve your security state AND prove compliance to auditors

The Shavlik Security Suite:

- ▶ Provides a data-rich environment to help make real-time decisions on how best to direct security resources to improve enterprise-wide security levels.
- ▶ Performs trending analysis so you can measure and document improvements with meaningful and repeatable metrics.
- ▶ Provides simplified and automated processes for patching all virtual machines, even those that are offline. This ensures that offline virtual images can be in a constant state of readiness to be deployed.
- ▶ Simplifies and automates security and compliance operations to improve speed, accuracy, and productivity, lower costs, support higher scale, and enable management of increasingly complex network environments. Makes the latest real-time security status easily accessible.
- ▶ Establishes your configuration baseline and then proactively enforces that policy by continuously identifying and fixing gaps in systems that deviate in your security and configuration controls.

Continuously improve security and compliance readiness.

90% of Internet attacks exploit unpatched or mis-configured systems.

- ▶ **Application Control** – A key to gaining control over your system security is to first understand what's installed on every machine. Shavlik's solutions identify potentially harmful applications and automatically remove those that violate corporate policy.
- ▶ **Patch Management** – Shavlik's Any Patch, Anywhere technology allows customers to patch virtually any Windows application on their network. Shavlik's solutions automate detection and remediation of critical security patches resulting in an enterprise that is ready to improve speed, accuracy and productivity of IT operations.
- ▶ **Virtualization Security** – Shavlik Technologies provides the same secure operating base and patch management for virtual machines as we do for their physical counterparts. Shavlik Technologies has developed a way to patch all virtual machines, even those that are offline. This ensures that offline virtual images can be in a constant state of readiness to be deployed. IT staff can quickly verify and report that 100% of the organization's vulnerable machines – physical, virtual, and offline – have received a specific critical patch and are protected.
- ▶ **Security Configuration Management** – Shavlik provides an automated way to scan for, compare, and enforce security configuration settings on your network. This provides a comprehensive method for detecting systems that have drifted out of compliance with corporate policy, and then quickly remediate or enforce the existing policies, returning the affected systems to the "desired state."
- ▶ **Risk and Compliance Management** – Shavlik's solutions simplify and automate the management of critical system and security configuration settings on your network - while mapping those settings back to stated security policies and regulatory requirements. The Shavlik solution provides visibility of your latest real-time security status, and automatically finds and fixes gaps in your system security.

Quickly Analyze Security and Compliance Trend Data

What is Shavlik Rapid Readiness?

- ▶ **READY REACH** – Direct better intelligence to support fact-based decision making.
- ▶ **READY REMEDIATION** – Drive a higher state of security and compliance readiness.
- ▶ **READY RESULTS** – Drive long term, continuous improvement of enterprise security and compliance operations and results.
- ▶ **READY REPORTING** – Demonstrate security and compliance through continuous security and configuration assessments.
